

I had three main goals: Readability, Simplicity, and scalability.

1) Readability:

- a) I divided everything into three categories, all of which are somewhat related.
- b) Each of the categories is surrounded by a golden border because it helps compartmentalize the information.
- c) The Course Code, Credits, and Professor are the upper left because they are pieces of information that should always be seen quickly.
- d) I put the Status, Seats, etc below because it only requires a cursory glance and doesn't have as much information as the block to the right.
- e) The third block is larger and has more relevant information, which is why I have it by itself and easily readable.
- f) I made the nav bar at the bottom easy to tell what it is by using the vertical lines to just reinforce that they are links.
- g) Finally, I put the Course name at the very top, for two reasons:
 - i) It is necessary, and is essentially the title of the page, so it should have its own "block"
 - ii) Once seen, the user doesn't need to be reminded constantly which page they are on, so I tucked it away up to the left. This will allow the user to easily find it when they want it, but also it doesn't detract from the rest of the information on the page.

2) Simplicity:

- a) I kept all the graphics / designs simple because this page isn't supposed to be fancy. It's a very utilitarian page, and too much color will detract from the information being communicated.
- b) I kept the colors very similar to my previous page, and to geneva's page's in general, so that they flow together as seamlessly as possible.
- c) The bar on the bottom is just supposed to fill white space, it's the one thing I wasn't quite sure about.

3) Scalability:

- a) I tried to make the page look good while it was being viewed at almost any screen size. It still wouldn't work very well for mobile, since I'm not that skilled yet, but I think it looks good at nearly every screen size.

Thanks!
